

DynamicTables

Table Of Contents

Overview

Why are we making this component, what's the purpose and use case.

Column Headers

Key identifiers for columns and contain features for sorting and tooltips.

Creating And Editing Entries

If the user selects a row/item this will appear to allow the user to edit the entry in the larger dialog view instead of using live editing.

Error Handling

If the user selects a row/item this will appear to allow the user to edit the entry in the larger dialog view instead of using live editing.

Main Component

Final variations of the component are stored here for consumption by designers.

Titles And Placement

General layout, grid setup and title positions.

Highlighting And Filtering

Quickly view the information you want to see.

Stickied Columns

Clicking this will show a menu of filters.

Pagination And Scrolling

...

Toolbar

A location for quick action tools like filtering, searching, creation and deletion.

Cell Types

An overview of the cell types, templates, and presets. Including a look at the binary cell type.

Search

Don't see something you need. Propose it!

Stickied First Column

...

Overview

The table is essentially a grid of information whether that be numbers, words, statuses, or actions. It is used to provide a scannable list of entries that all have the same properties.

- It is recommended for:**
- Situations where you have a lot of data to compare or manage.

- It is NOT recommended:**
- Locations listing
 - Task Lists
 - When the items listed vary in what types of information they contain

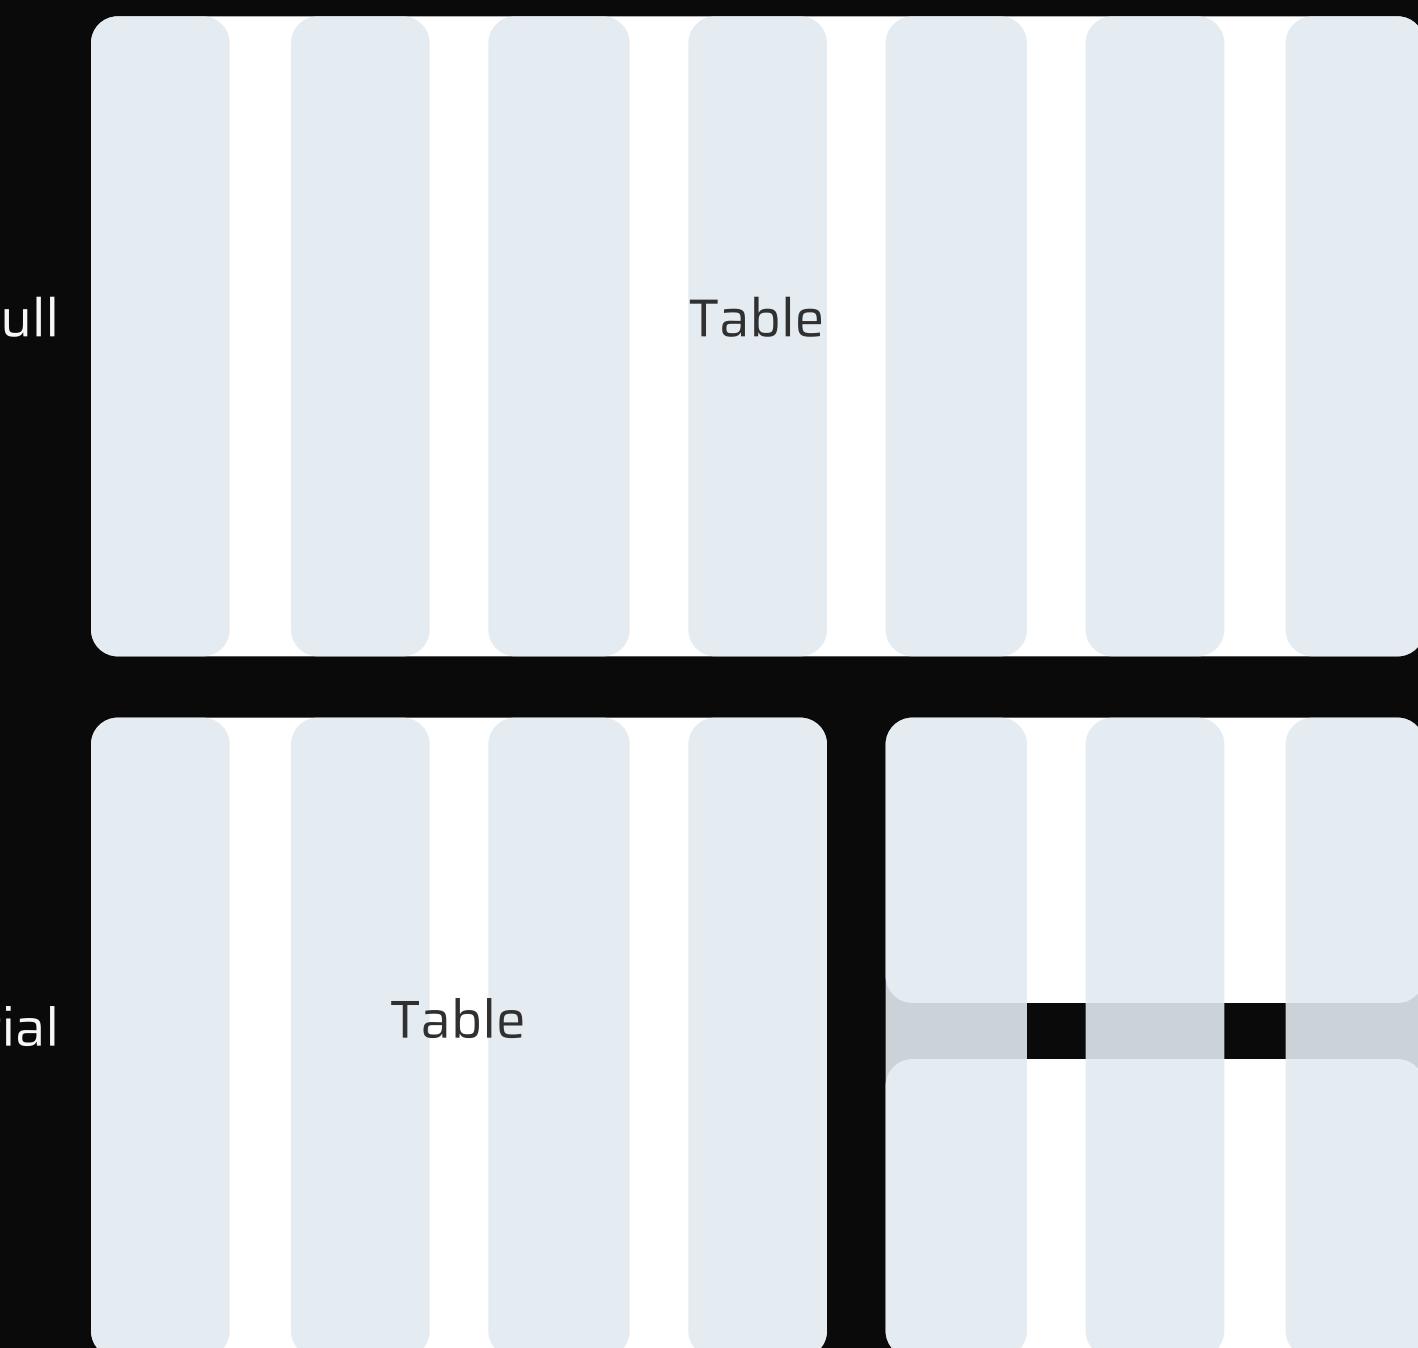

Titles And Placement

Where can the table live, how does it live, and how do we tell the users what the table is.

Grid

The table can live on the stage either full width or as part of a grid where you have content on the left or right of it.

There is no grid applied within the table because the contents within it are variable in there size. But the overall size of the table can be determined by a grid by defining the amount of columns it takes up.

Placement

As mentioned before, the table can be on the stage and that is where it performs the best. But it can also be used in smaller locations. When you are thinking of placing this in a smaller location look at other options first. If you have to use a table try to keep the amount of UI and functionality down. You don't need all the bells and whistles!

Titles

People want to know what the table is! So we are going to want to give it a title. Titles live outside of the table and give you some freedom for how you want to treat it. Whether that be just a title, title with description, or all the above with an icon as well.

Table

Now that is a really cool table.

Table

Now that is a really cool table.

Tool Bar

The functional hub of the table. This contains basic operations like creation, deletion, and filtering. Keep in mind all of these do NOT have to be used. Use what you need for the area you are working in.

Create New Entries

Can always be shown and brings up a dialog to create the new entry.

Show Edit Dialog

If the user selects a row/item this will appear to allow the user to edit the entry in the larger dialog view instead of using live editing.

Remove Entry

Appears when the user selects a row/item and selecting it will show a dialog telling them they are about to delete the item. If the user has multiple items selected it will delete them all.

Show Filter Menu

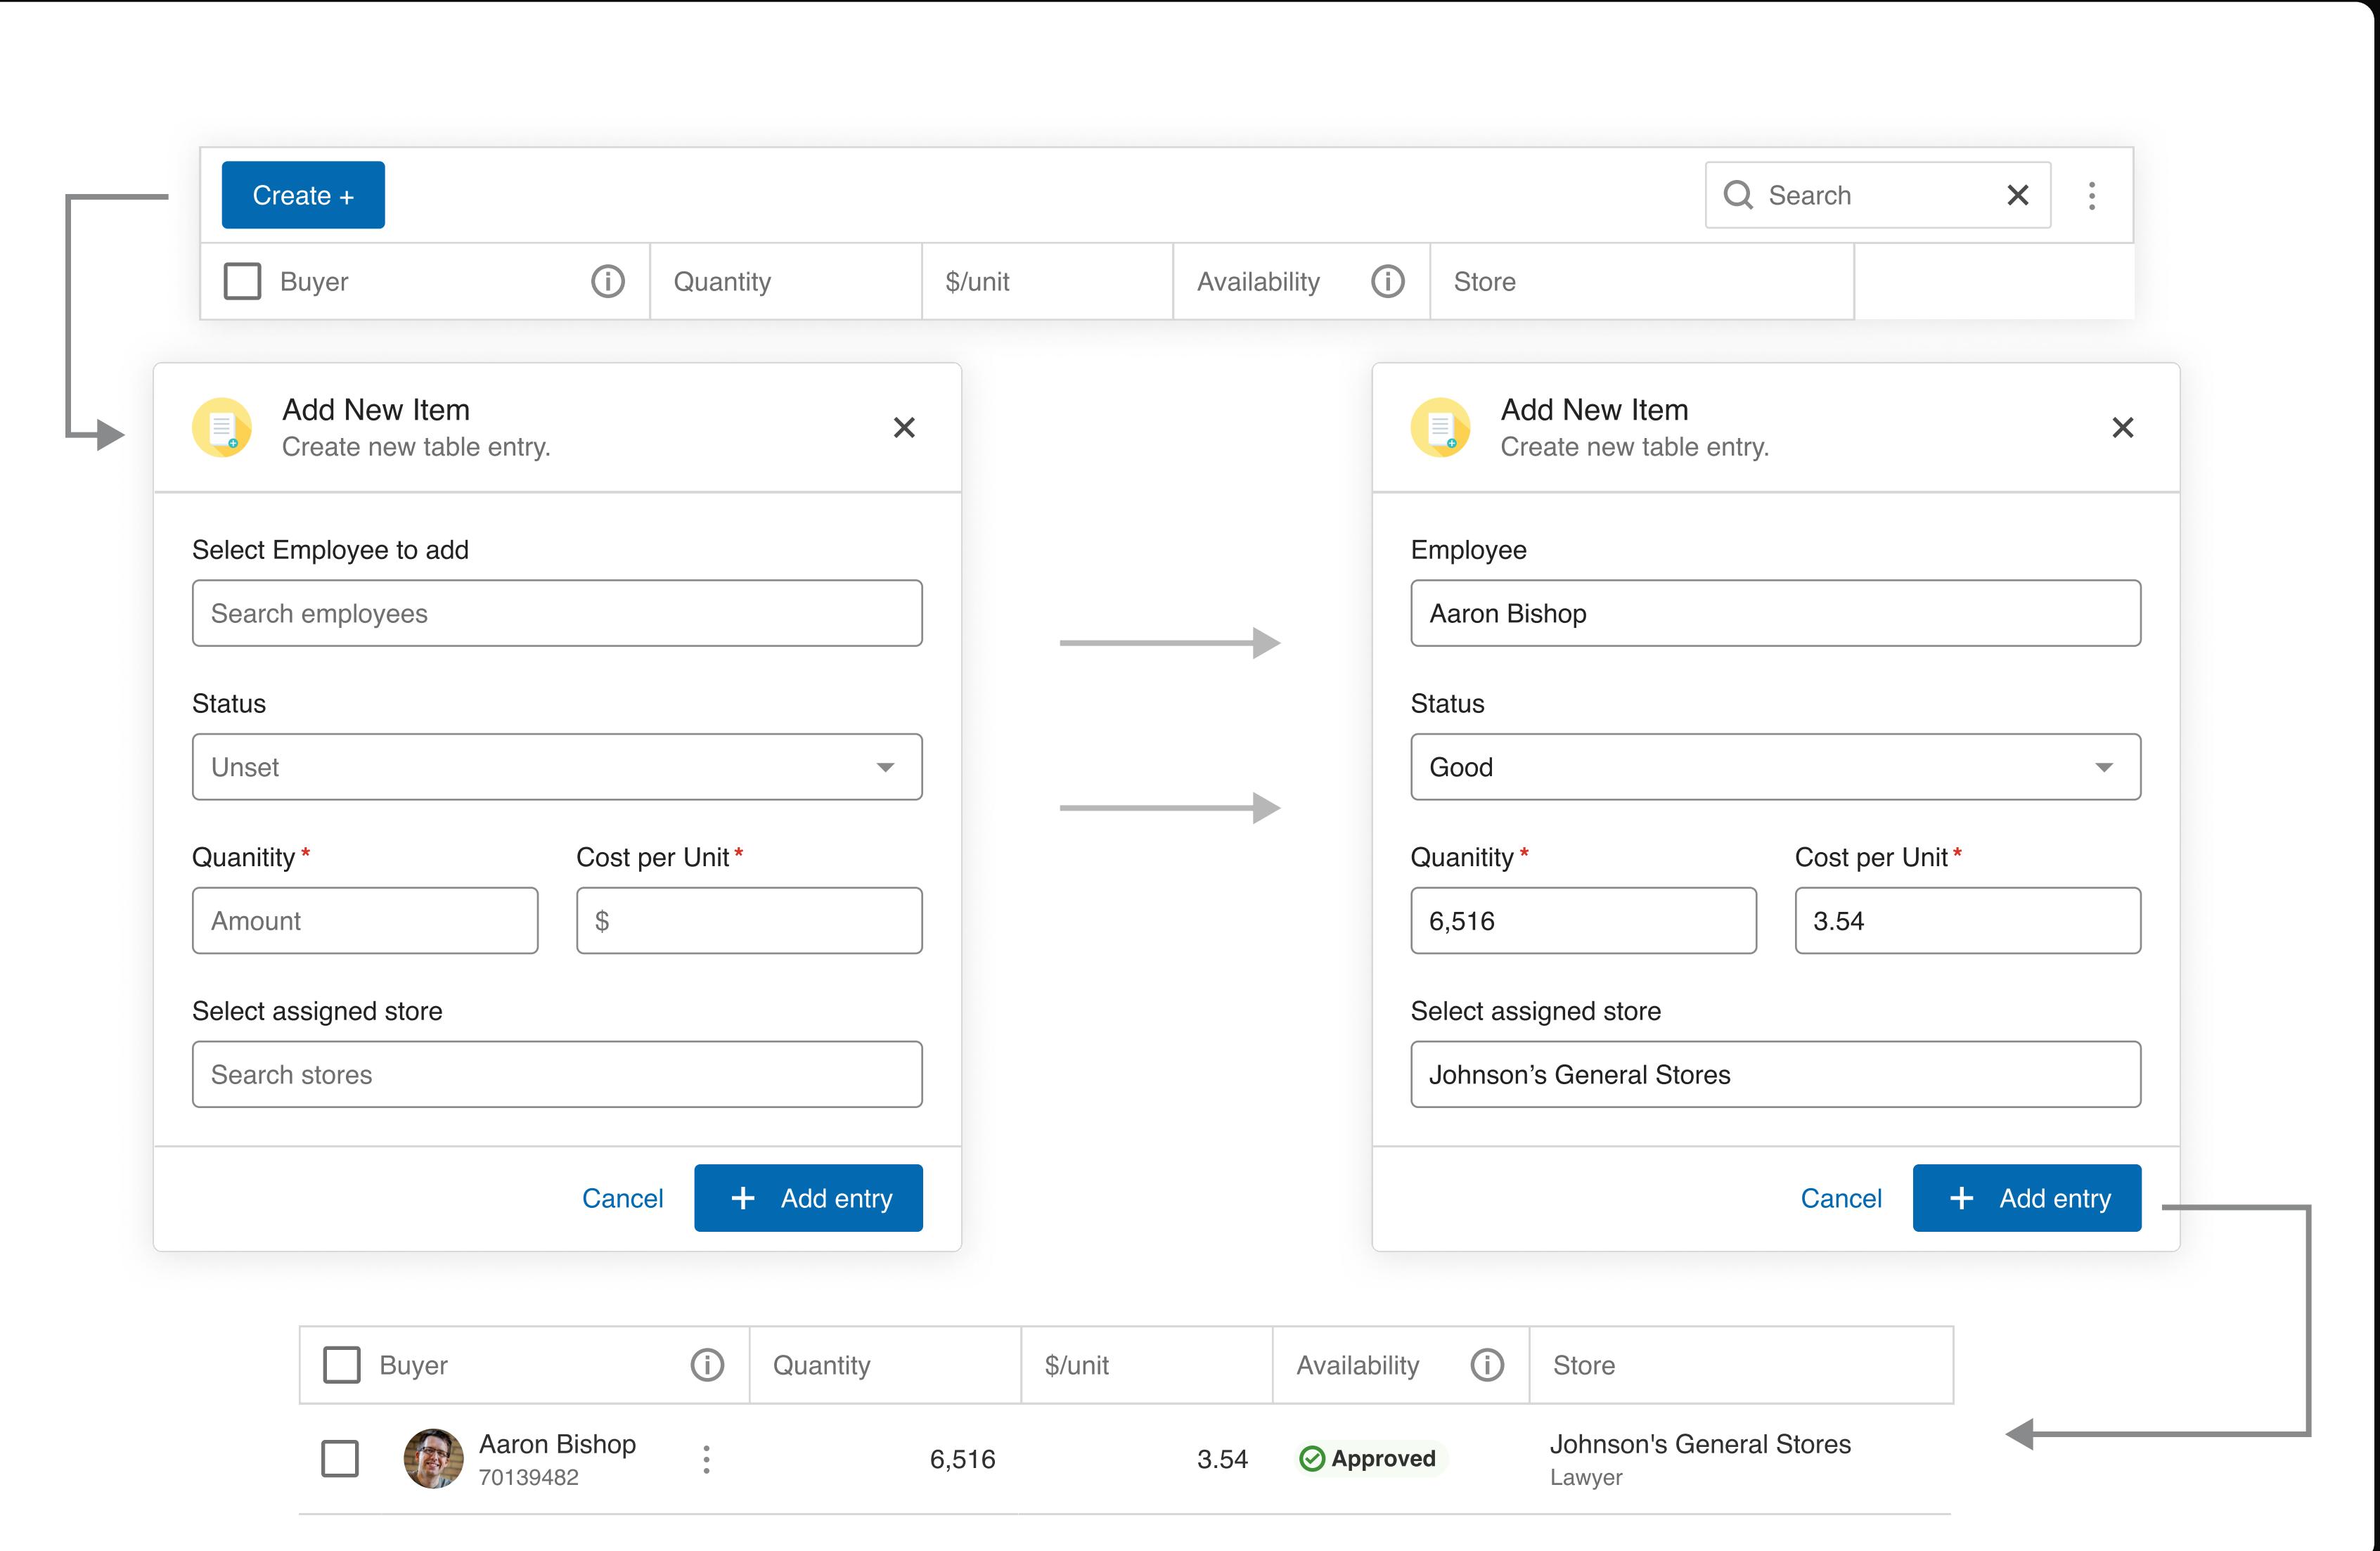

Selecting the filter button will bring up a menu for filtering. Once the filters are applied a number will appear indicating the amount of filters applied.

Table Options/Search

Clicking this will show a menu of table options. These options will depend on the table usage. This is more of a container for global table options.

The diagram illustrates the interaction between a table interface and an edit dialog. It starts with a 'Default' table view showing a single row for 'Aaron Bishop'. A downward arrow leads to a 'Selected' state where the same row is highlighted with a checkmark. Another downward arrow leads to a table header with a 'Edit' button. A horizontal arrow points from this header to an open 'Edit' dialog on the right. The dialog contains fields for 'Employee' (Aaron Bishop), 'Status' (Good), 'Quantity*' (6,516), 'Cost per Unit*' (3.54), and 'Select assigned store' (Johnson's General Stores). It also features 'Cancel' and 'Save' buttons. An upward arrow returns from the dialog to the 'Edit' button in the table header. Below the table header, a callout menu is shown for the 'Edit Entry' option, listing 'View Profile' and 'Edit Entry'.

Status

This is a preset for use of the status component within a cell. Keep the use of statuses limited and only give the most serious statuses a red alert status and utilize informational and expired style statuses.

Binary Cells

To reduce the need for using multiple status's in locations where only two opposite values can exist (true/false), this cell has a dot to denote whether something exists or not. Alternatively a glyph can be used if something like a comment exists. But it should not act as a navigation control. Those should be within the three dot menu.

Glyph Label

Controls

There are various controls available for function triggering and entry selection.

Check Boxes are used to select one or more entry.

Radio Buttons are used when only one entry can be chosen.

Button Cells allow for the use of the button within rows. These should exist at the end of the row and limited to one instance per row.

Items per page 10

Multi-page error handling:

Cell errors can occur on cells that may not be visible to the user due to it existing on a different page. The MMM is used to collect all of the errors and place them above the table, allowing users to quickly jump through the errors. The sizing of the MMM depends on the responsive columns set for it and should not need UX intervention to determine.

Creating And Editing Entries

These serve as the categories or titles for columns of information. They have additional functionality for sorting and highlighting.

Create Button

When entries are not selected a creation dialog will show allowing users to create new and empty entries to the table.

Single And Group Selection Editing

You can either select one entity and open a dialog to edit it or select multiple entries and edit all the fields that are the same.

Live Editing

Clicking or tabbing to a cell will trigger a mini editing dialog to appear.

The diagram illustrates three methods of interacting with table entries:

- Create Button:** Shows a table row with a checkbox for selection. A creation dialog on the right allows users to enter new data like "Mixed" for Employee and "Good" for Status.
- Single And Group Selection Editing:** Shows a table row with a checked checkbox. An "Edit" button is highlighted, indicating the user can edit the selected entry. A secondary row shows a three-dot menu with "Edit Entry" option.
- Live Editing:** Shows a table row with a checkbox. A small edit icon appears over the Employee field, indicating it's currently being edited.

Below the table rows, explanatory text states:

- "Editing can either be done by selecting one or more items and choosing the "edit" option or by selecting within the three dot menu if it exists."
- "If multiple options are selected and they have the same value they can be mass edited. Values that are not the same will say "Mixed" and be disabled."

Creating And Editing Entries

These serve as the categories or titles for columns of information. They have additional functionality for sorting and highlighting.

Create Button

When entries are not selected a creation dialog will show allowing users to create new and empty entries to the table.

Single And Group Selection Editing

You can either select one entity and open a dialog to edit it or select multiple entries and edit all the fields that are the same.

Live Editing

Clicking or tabbing to a cell will trigger a mini editing dialog to appear.

The screenshot displays a user interface for managing table entries. At the top, there are two buttons: "Limit Shown Columns" and "Show All Columns". Below these are two side-by-side "Add New Item" dialogs. Each dialog includes a "Focus Mode" toggle switch (set to "On" on the left, "Off" on the right), an "Editing Section" header, and a "Cancel or Save Entry" footer with "Cancel" and "Save" buttons. The left dialog's "Editing Section" contains fields for "Select Employee to add" (with a "Search employees" input), "Status" (dropdown menu set to "Unset"), "Quantity *" (dropdown menu set to "Amount"), "Cost per Unit *" (dropdown menu set to "\$"), and "Select assigned store" (with a "Search stores" input). The right dialog's "Editing Section" is identical but lacks the "Status" field. Below the dialogs, three descriptive callouts provide details about the "Editing Section", "Focus Mode", and "Cancel or Save Entry" components.

Editing Section
Section that contains all of the possible columns for the entry. There can be disabled

Focus Mode
Toggles the showing of hidden columns on and off.

Cancel or Save Entry
Options to cancel any edits that were made and add entry saves the changes.

Creating And Editing Entries

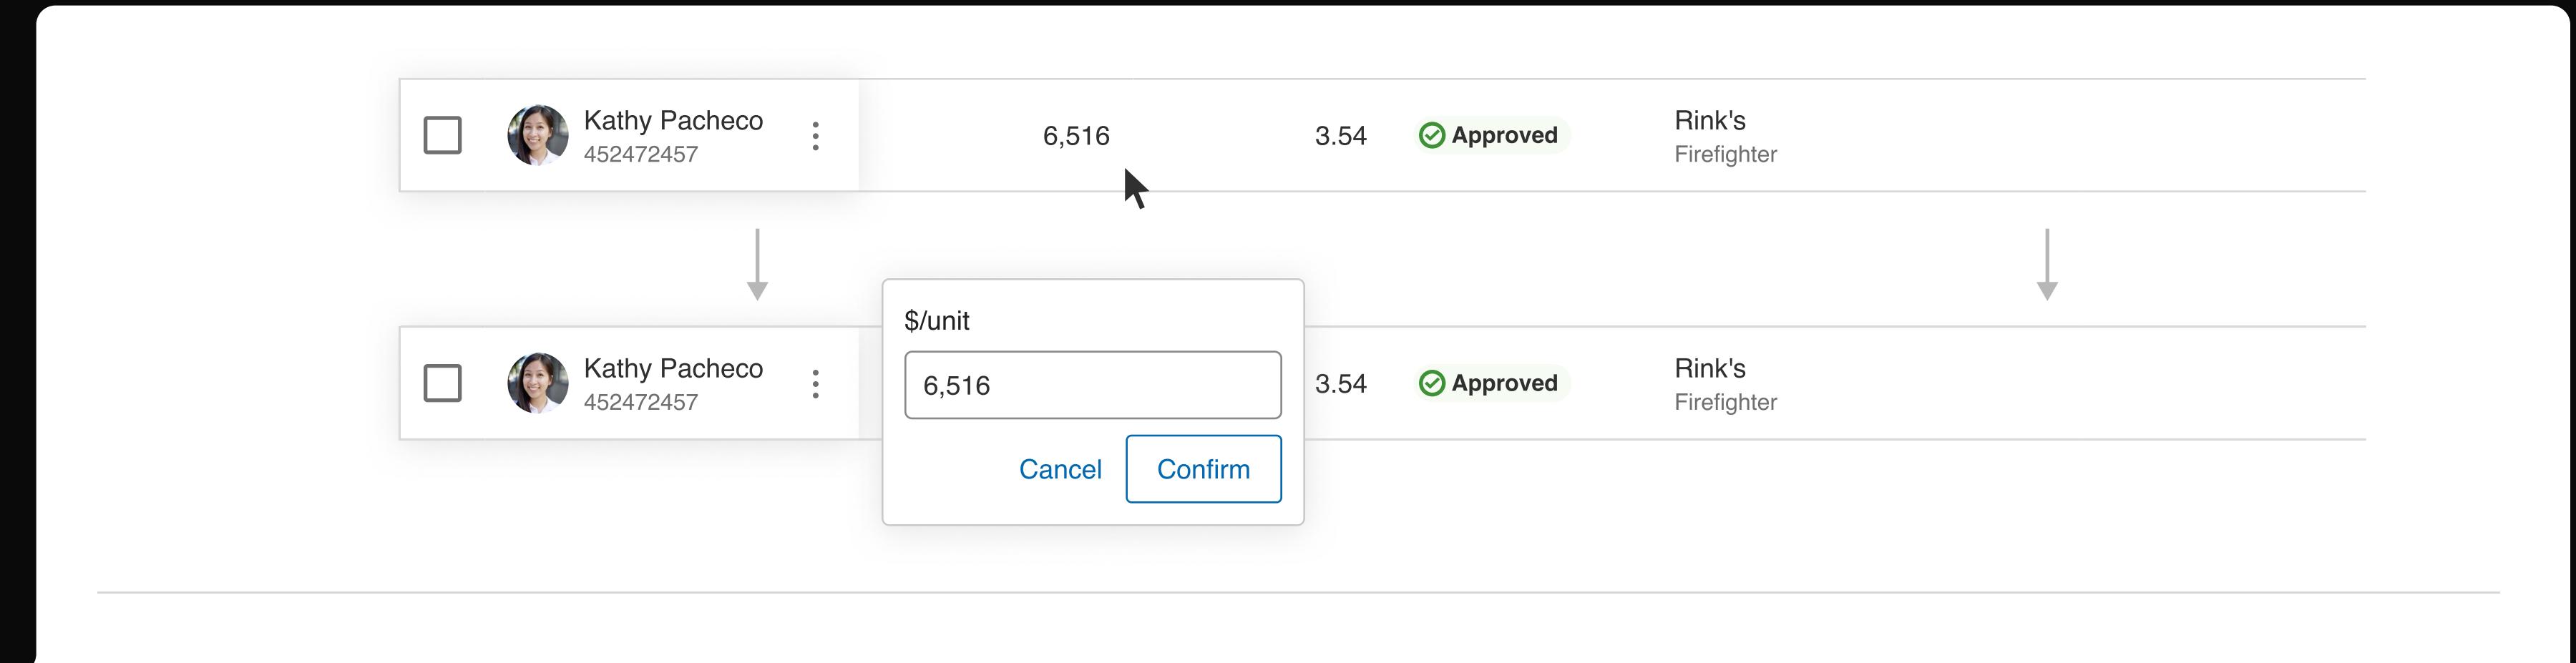

These serve as the categories or titles for columns of information. They have additional functionality for sorting and highlighting.

Create Button

When entries are not selected a creation dialog will show allowing users to create new and empty entries to the table.

Single And Group Selection Editing

You can either select one entity and open a dialog to edit it or select multiple entries and edit all the fields that are the same.

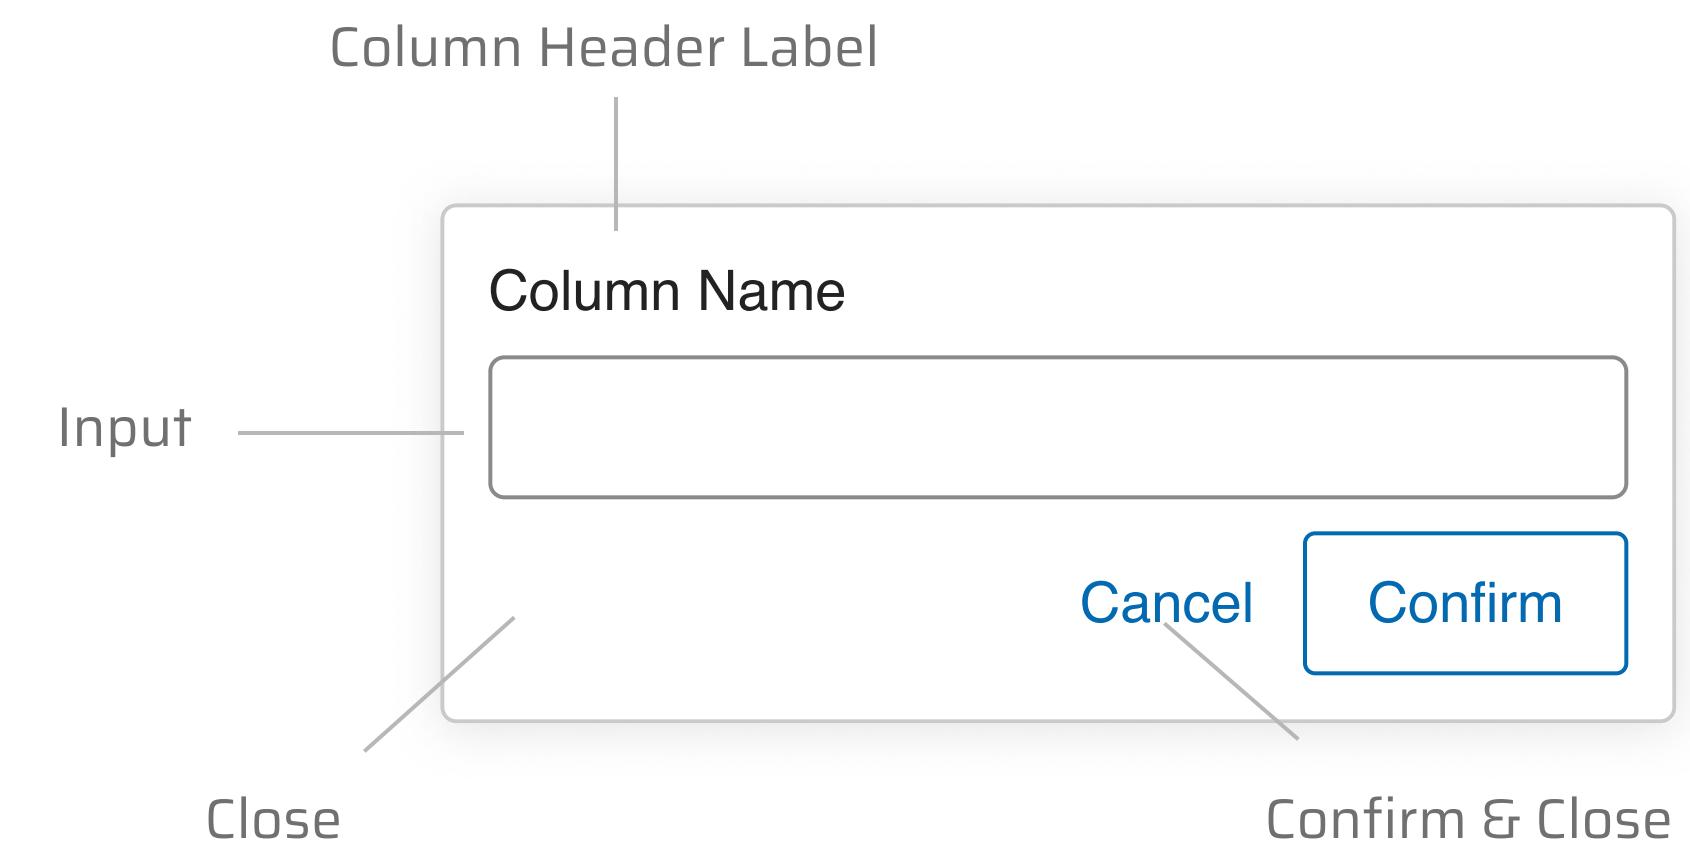

Live Editing

Clicking or tabbing to a cell will trigger a mini editing dialog to appear.

Cell Editing

You can hit enter or click to confirm instead of clicking off and accidentally clicking another cell or being worried you might edit something you do not intend to.

Esc - Closes the edit window without saving
Pressing Enter or tabbing to "Confirm" - Closes and saves
Users can tab to an entry and press enter to enter the edit menu

Pagination And Scrolling

The table should fit the height of the container you give it and not require the user to scroll the page. You can use scrolling if a user selects an amount of items they want shown that is larger then the container. Use pagination for items that exceed the amount shown.

Page of 25

In this example the user set there to be 10 items per page. This has caused the scroll bar to appear because the fixed height of the table cannot fit all 10 items.

There are also more items then the selected 10. So the rest of the items get placed into pages within the pagination control.

Stickied First Column

You have the option to make the first column in a table stuck. This adds a drop shadow effect to the column and if the table has horizontal scrolling shown then contents slide underneath it and the first column

Initial Release (Read Only)

A lot is outlined in the table documentation but to start only the basics will be created and we will work from there to get features added based on priority. Essentially just read only tables will be created, headers, sorting, and cells.

Headers and Sorting

Cell Sizing:

- Cells are no larger than the largest amount of content in a cell in that column.
- The rest of the space is filled with a blank cell.

Identification #	Quantity	\$/un

Sticked First Column

Main Component

These serve as the categories or titles for columns of information. They have additional functionality for sorting and highlighting.

The diagram illustrates several user interface components:

- Sorting and Filtering:** A section containing four pairs of buttons labeled "Employee" with arrows pointing up and down, and "Employee" with a magnifying glass icon.
- Status Indicators:** A section showing five status icons: "Needs Attention" (red circle with exclamation), "Could Be a Problem" (orange triangle with exclamation), "Good" (green checkmark), "Informational" (blue dot), and "Unset" (grey dot).
- Sorting Controls:** A section with two sets of sorting controls. One set includes "A" and "Z" with downward arrows, and "1" and "9" with downward arrows. Another set includes "A" and "Z" with upward arrows, and "1" and "9" with upward arrows.
- Placeholder:** A placeholder card with the text "Replace me".
- Label:** A label card with the text "Label".
- Card Components:** Three cards for "Part-Time Career" with different status icons: a yellow warning icon, a red error icon, and a green checkmark icon.
- Approval Status:** A card with the text "Approved".
- Icons:** A row of three circular icons: an empty square, a white circle, and a black circle.
- Profile Card:** A card for "Aaron Bishop" with ID "70139482" and a three-dot menu icon.
- Client Summary:** A summary card for "Clients" showing a count of "13".
- Direct Reports:** A summary card for "Direct Reports" showing a count of "132".
- Quantity Input:** An input field for "Quantity" with value "203", and "Cancel" and "Confirm" buttons.
- Modal Dialog:** A modal dialog with "Column Name" input, "Cancel" button, and "Confirm" button.

Future Proposal

Slide Out Filtering

This is a more mobile friendly and versatile version of filtering that would replace the menu style filtering in legacy.

Future Proposal

Multiplayer

Allow multiple users to collaborate on data sheets at the same time and Paychex Support to work with clients on there data synchronously.

The screenshot shows a data sheet interface with a header row and eight data rows. The header includes columns for Buyer (checkbox), Quantity, \$/unit, Availability (checkbox), and Store. The data rows list various individuals with their names, employee IDs, quantities, unit prices, availability status, and stores. A yellow callout bubble labeled 'JG' is positioned over the 'Approved' status of the third row (John Dukes). A green callout bubble labeled 'LP' is positioned over the 'Approved' status of the eighth row (Jude Rivers). A red callout bubble labeled 'MQ' is positioned over the name 'Rainbow Bay Crafts' in the seventh row (Katie Sims). A purple callout bubble labeled 'Mary Quinn' is positioned over the name 'Rainbow Bay Crafts' in the seventh row (Katie Sims).
